

Ecologically Aware & Environmentally Friendly High Performance Flooring

Satin Flooring High Performance Flooring consists of 90 percent wood. Only timber obtained from thinning indigenous, sustainably managed forests is used in the production of Satin Flooring High Performance Flooring. To this end, the origin of the timbers is credited by the **PEFC** (Pan European Forest- Cortication) and the **FSC** (Forest Stewardship Council), two independent test institutes.

In addition, wood residues from the sawmill industry such as slivers, chippings, and wood shavings are mainly used. Therefore we primarily renew residual wood produced as by-products in other production processes or by forest maintenance. Satin Flooring High Performance Flooring consists of 90 percent wood. Only timber obtained from thinning indigenous, sustainably managed forests is used in the production of Satin Flooring High Performance Flooring. To this end, the origin of the timbers is credited by the **PEFC** (Pan European Forest-Cortication) and the **FSC** (Forest Stewardship Council), two independent test institutes.
